

## HP2600CHE- Refill instruction for Q6000A/Q6001A/Q6002A/Q6003A Toner Cartridges

The first step in refilling your color laserjet cartridges is to **EMPTY THE WASTE HOPPER**. This is an essential step because waste toner has accumulated in the hopper (which is like a waste collection space). You can empty the waste hopper by using the hole making tool (not included) to make a hole at the location shown in the photo on the left. You need to remove the round plastic piece that is burnt out by the tool. Now slowly turn the cartridge upside down over a trash collection bag so that the waste toner can empty out. When empty, you can seal this hole using electrical tape.

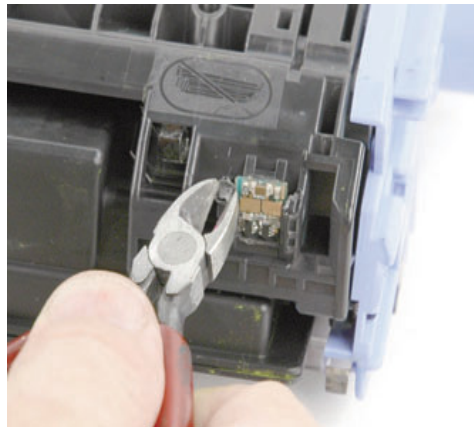

Use a hole making tool (not included) to make a hole on the cartridge in the spot indicated in picture on the left. If the small piece of plastic has fallen into the cartridge, it must be removed, as this can damage your cartridge or cause print defects.

***IMPORTANT: You must dispose of any original toner in the cartridge as much as possible before refilling. Dispose of toner properly into a trash can, or use a vacuum with a hose for best results (if possible).***

Fill the toner hopper through the hole on top of the hopper. Seal the hole using a fill plug.

Using diagonal cutters or a utility knife, partially remove the top part of the plastic that locks the chip in place. Remove the chip by sliding it up and out. Place a new chip onto the slot.
